

## How to clean the Lukr Faucet (end of shift)

-Remove the spout from the faucet

-Use a water bottle to remove the gasket if it remains and to clean the faucet

-Remove the nozzle from the spout and the screen inside the nozzle

-Place all the parts in a container with StarSan and fill the bowl with water to let them all soak until the next shift  
-Rinse all the parts thoroughly and reverse the process to reinstall the faucet
