

# Jeep JLU Rear Plate for Refrigerator Slide Mount and Cabinets

## Build Notes

1. Begin install cutting 4x8" Birch Plywood down to 38.5" by 30.25"
2. In order to insure critical location of the holes perform all measurements from top right side. This will reduce measurement error.
3. Holes should be symmetrical from each side, however, to insure proper distance between holes measure left set of holes from right holes. This will insure that the holes match and if necessary you can cut the outskirts of panel to fit.
4. Check measurements from opposite side to double check accurate measurement from top right side prior to cutting.
